PROFESSIONAL SUMMARY

MCA Data Science graduate seeking entry-level Data Analyst opportunities. Hands-on exposure to SQL, Python, ETL, data preparation, exploratory analysis, Business Intelligence and reporting. Proficient in Pandas, NumPy, MySQL, Microsoft SQL Server, Excel, Power BI and Tableau. During an internship, processed 15,000+ records and cut report generation time by approximately 25% through indexing and query tuning. Academic work includes a 10,000+ record sales study, predictive modelling and interactive dashboards.

TECHNICAL SKILLS

Languages: Python, SQL

Analytics: Exploratory Data Analysis, Data Cleaning, Data Validation, Statistical Analysis, Feature Engineering

Databases: MySQL, Microsoft SQL Server, Relational Databases, Data Modelling, Database Design, Query Optimisation

Reporting: Power BI, Tableau, Microsoft Excel, KPI Reporting, Dashboard Development, Business Intelligence

Libraries: Pandas, NumPy, Matplotlib, Scikit-learn, TensorFlow

Data & Cloud: ETL, Data Extraction, Transformation, Data Loading, Data Quality, Data Integration, Azure, Generative AI

PROFESSIONAL EXPERIENCE

Software Engineering Intern | India Tech Soft, Pune

Jun 2025 – Aug 2025

- Optimised MySQL and Microsoft SQL Server queries for data retrieval and ETL workflows, cutting report generation time by approximately 25% through indexing and query tuning.
- Prepared, checked and standardised 15,000+ structured records with Python and Pandas, improving consistency for downstream Business Intelligence reporting.
- Designed normalised relational schemas and refined query structures to strengthen integrity, retrieval efficiency and scalability across application modules.
- Supported requirements gathering, QA testing and debugging within SDLC workflows, helping maintain application stability and reduce post-deployment defects.

PROJECTS

Sales Data Analysis Dashboard | Python | Pandas | NumPy | SQL | Tableau | Power BI | ETL

- Examined 10,000+ sales records with Python, Pandas, EDA and SQL joins to identify revenue trends, customer behaviour and category performance.
- Built an ETL pipeline covering extraction, cleansing, transformation and validation, producing analysis-ready datasets for reporting.
- Created interactive Power BI and Tableau dashboards with KPI tracking, trend views and performance reporting to support evidence-based decisions.
- Identified process opportunities with potential to improve operational efficiency by approximately 15% from the project findings.

Aerospace Engine Health Monitoring & Anomaly Detection | Python | Scikit-learn | TensorFlow | Azure | Power BI

- Applied Random Forest and LSTM techniques to aerospace sensor datasets for anomaly detection and Remaining Useful Life (RUL) forecasting.
- Performed feature engineering, preprocessing and model evaluation using Pandas, NumPy, Scikit-learn and TensorFlow.
- Presented engineering KPIs through Power BI for monitoring and analytical reporting.

Employee Performance Analysis | Python | Pandas | Scikit-learn | Power BI | Matplotlib

- Explored HR data to identify employee performance patterns and business insights, then applied Scikit-learn models for prediction.
- Communicated findings through Power BI dashboards and Matplotlib visualisations for evidence-based decision-making.

EDUCATION

MCA – Data Science | MIT ADT University

2024 – 2026 | CGPA 8.0

B.Sc. – Computer Science | MIT ACSC

2021 – 2024 | CGPA 7.9

CERTIFICATIONS

[Databases and SQL for Data Science with Python](#) — IBM / Coursera

[Statistics for Data Science with Python](#) — IBM / Coursera

[Fundamentals of Visualization with Tableau](#) — UC Davis / Coursera

ACHIEVEMENTS & ACTIVITIES

Event Coordinator — Sci-Fari Technical Event, MIT College • Volunteer — Science Week, MIT College • Winner — Kshitij Cricket Tournament
